A – Estimated SUR (Seemingly Unrelated Regression) model and variables

A1 - VOTE FUNCTION (SUR MODEL) : VARIABLES DESCRIPTION

Equation (1)

INC^{MAIN}: vote share (%) obtained by the party of the incumbent Chancellor.

1961-1969: CDU/CSU

1972-1983: SPD (Helmut Kohl becomes Chancellor on October 1982 following the FDP's reversal of alliance. However, in 1983 we consider the SPD to be the real incumbent.)

1997-1998: CDU/CSU

2002-2005: SPD

2009-2021: CDU/CSU

2025: SPD

CDU/CSU : the Union, is a centre-right Christian democratic and conservative political alliance of two political parties in Germany: the Christian Democratic Union of Germany (CDU) and the Christian Social Union in Bavaria (CSU).

SPD: The Social Democratic Party of Germany (Sozialdemokratische Partei Deutschlands,) is a social democratic political party in Germany.

POP^{INC}: average voting intentions (one quarter before the election) for the party of the incumbent chancellor (Source: IFD Allensbach; 1961-2025)

Question: If there were a federal election next Sunday, people would vote... (1000 respondents on average)

ΔU_{Q-2} : variation of the unemployment rate (U) measured two quarters before the election, over the duration of the elapsed mandate. (Source : Arbeitsmarktstatistik der Bundesagentur für Arbeit, Nürnberg).

GCOAL^{09/21} : dummy variable coded 1 (0 otherwise) for each “Grand Coalition” CDU/CSU-SPD in 2009, 2017 and 2021.

KANZ_{Q-1}^{INC} : preference for the incumbent chancellor, or the representative of his camp, measured one quarter before the election. (Source : Forschungsgruppe Wahlen e.V.,Mannheim, Zentralarchiv für empirische Sozialforschung (1961-2002). ZDF Politbarometer (for Koalitionspräferenz) (2005-2024).

Question : “Which of these two candidates would you like to have as Chancellor?”

Incumbents : Konrad Adenauer, CDU/CSU (1961); Ludwig Erhard, CDU/CSU (1965); Kurt Georg Kiesinger (1969) CDU/CSU; Willy Brandt, SPD (1972); Helmut Schmidt (1976; 1980), SPD; Hans-Jochen Vogel , SPD (1983)(*); Helmut Kohl, CDU/CSU (1987, 1990, 1994), 1998), Gerhard Schröder, SPD (2002, 2005), Angela Merkel, CDU/CSU (2009, 2013, 2017); Armin Laschet, CDU/CSU (2021), Olaf Scholz, SPD (2025).

(*) In our model Hans-Jochen Vogel (SPD) is considered as the “true” incumbent insofar as Helmut Schmidt ruled from 1980 to October 1982.

AFD1321: dummy variable coded 1 (0 otherwise) whenever AFD has competed (2013-2021)

DUM72: dummy variable coded 1 (0 otherwise) for the early elections of 1972 (DUM72), following Willy Brandt's defeat in the Bundestag.

STRAUSS80: dummy variable coded 1 (0 otherwise) to mention that in 1980, the incumbent Chancellor Helmut Schmidt, has been beaten by the Franz Josef Strauss, the leader of the CSU. However, the Liberal Democratic Party (FDP), led by Federal Foreign Minister Hans-Dietrich Genscher renewed its alliance with the Social Democrats to continue the Social Liberal coalition, thus ensuring Schmidt's re-election to the Chancellery.

Equation (2)

OPP^{MAIN} : vote share (%) obtained by the main party opposing the outgoing chancellor

1961-1969: SPD

1972-1983: CDU/CSU (Helmut Kohl (CDU/CSU) becomes Chancellor on October 1982 following the FDP's reversal of alliance. However, in 1983 we consider the CDU/CSU to be the real opponent to the incumbent since it only ruled for one year)

1997-1998: SPD

2002-2005: CDU/CSU

2009-2021: SPD

2025: CDU/CSU

POP^{OPP} : average voting intentions (one quarter before the election) for the main opponent party to the incumbent chancellor (Source: IFD Allensbach; 1961-2025)

U_{Q-2} : variation of the unemployment rate (U) measured two quarters before the election, over the duration of the elapsed mandate. (Source : Arbeitsmarktstatistik der Bundesagentur für Arbeit, Nürnberg).

DISSOL05: dummy variable coded 1 (0 otherwise) for G. Schroeder's strategic" dissolution before the end of the term.

AFD1321: dummy variable coded 1 (0 otherwise) whenever AFD has competed (2013-2021)

GRUNE^{OPP}: dummy variable coded 1 (0 otherwise) when Greens are opponents from 1980 to 1998 and from 2009 to 2021.

Equation (3)

FDP: vote share (%) obtained by the Liberal Democrats of the FDP, often the pivotal party if the German political life. (Source: IFD Allensbach; 1961-2025)

FDP: The Free Democratic Party (Freie Demokratische Partei, is a liberal political party in Germany.

CO_{INC}^{FDP/CDU} : percentage of voters expressing their wish to see the FDP (when it is incumbent) included in a new coalition with the CDU/CSU. This variable takes a “0” from 1972 to 1983; from 2002 to 2009 and then in 2017 and 2021.

CO_{INC}^{FDP/SPD} : percentage of voters expressing their wish to see the FDP (when it is incumbent) included in a new coalition with the SPD. This variable takes a “0” except from 1972 to 1983.

CO_{OPP}^{FDP/CDU} : percentage of voters expressing their wish to see the FDP (when it is in opposition with the CDU/CSU) included in a new coalition with the CDU/CSU. This variable takes a “0” except from 2002 to 2009 and then in 2017 and 2021. Source : Forschungsgruppe Wahlen e.V.,Mannheim, Zentralarchiv für empirische Sozialforschung (1961-2002). ZDF Politbarometer (for Koalitionspräferenz) (2005-2024).

FDPINF5: dummy variable coded 1 (0 otherwise) when the FDP did not exceed the threshold of 5% of the votes and could not obtain seats like in 2013.

DUM21: dummy variable coded 1 (0 otherwise) in 2021 when the prospect of becoming a supporting party in 2021 brought the FDP an average electoral boost to the detriment of the CDU.

FDP02: dummy variable coded 1 (0 otherwise) indicating that in 2002, for the first time since 1961, the FDP is not part of a coalition. This variable is measuring the average FDP’s electoral cost of no longer being part of a coalition.

Equation (4)

GRUNE: vote share (%) obtained by the Greens (Grünen). This variable takes a zero value from 1961 to 1976.

GREENS : Alliance 90/The Greens (Bündnis 90/Die Grünen), often simply referred to as Greens is a green political party in Germany. It was formed in 1993 by the merger of the Greens (formed in West Germany in 1980) and Alliance 90 (formed in East Germany in 1990). The Greens had itself merged with the East German Green Party after German reunification in 1990

NOGRUNE: dummy variable coded 1 (0 otherwise) when the Greens did not participate in elections from 1961 to 1976.

POPGRUNE: average voting intentions (one quarter before the election) for the Greens (Source: IFD Allensbach; 1980-2024)

REUNIF: dummy variable coded 1 (0 otherwise) pointing out that the first reunification elections in 1990 were unfavorable to the Greens

CO_{INC}^{SPD/GRUNE}: percentage of voters expressing their wish to see the Greens (when it is incumbent) included in a new coalition with the SPD. This variable takes a “0” except in 2002 and 2005. Source : Forschungsgruppe Wahlen e.V.,Mannheim, Zentralarchiv für empirische Sozialforschung (1961-2002). ZDF Politbarometer (for Koalitionspräferenz) (2005-2024).

Equation (5)

FARLEFT: vote share (%) obtained by the Far left parties. This variable takes a zero value from 1961 to 1976. This bloc includes the parties born with German reunification in 1990. They are the PDS (Social Democratic Party; 1990-2005) and Die Linke (The Left; 2009-2025).

PDS: the Party of Democratic Socialism (Partei des Demokratischen Sozialismus) was a left-wing populist political party in Germany active between 1989 and 2007.
Die Linke: the Left (Die Linke or the Left Party (Die Linkspartei is a democratic socialist political party in Germany. The party was founded in 2007 as the result of the merger of the Party of Democratic Socialism (PDS) and Labour and Social Justice

NOLINKE: dummy variable coded 1 (0 otherwise) when the Far left did not participate in elections from 1961 to 1987.

POPFARLEFT: average voting intentions (one quarter before the election) for the Far left (Source: IFD Allensbach; (1990-2025)

NEWLEFT0521: variable coded 1 (0 otherwise) pointing out the period (2005 to 2021) from which the PDS was transformed into a new party (Die Linke), under the impulse of Oskar Lafontaine

Equation (6)

FARIGHT: vote share (%) obtained by the Far right parties. This bloc includes the following parties:

1961 (DRP , GDP); 1965 (NPD); 1969 (GDP, NPD); 1972 (DVU, NPD); 1976 (DVU, NPD); 1980 (DVU, NPD); 1983 (DVU, NPD); 1987 (DVU, NPD); 1990 (DVU, NPD, REP), 1994 (DVU, NPD, REP); 1998 (DVU, NPD, REP), 2002 (DVU, NPD, REP), 2005 (DVU, NPD, REP), 2009 (DVU, NPD, REP), 2013 (NPD, REP, AFD), 2017 (NPD, AFD), 2021 (NPD, AFD).

DRP : Deutsche Reichspartei
GDP : Nationaldemokratische Partei Deutschlands,
DVU : Deutsche Volkunion
REP : Die Republikaner
AFD : Alternative für Deutschland

POPFARIGHT : average voting intentions (one quarter before the election) for the Far right (Source: IFD Allensbach; (1961-2025)

AFD1321: dummy variable coded 1 (0 otherwise) since the AFD has competed (2013-2021)

Equation (7)

OTHERS: vote share (%) obtained by the other parties. Aggregate sum of parties other than those listed in the preceding blocks

POPOTHERS: aggregated average voting intentions for the other parties (Source: IFD Allensbach; (1961-2025)

FW1321 : dummy variable coded 1 (0 otherwise) since the Free Voters party (Freie Wähler partei) party competed (2013-2021).

A3 - SWING RATIO (SUR MODEL) : VARIABLES DESCRIPTION

Equation (1)

SEATINC: seat share (%) obtained by the party of the incumbent Chancellor.

INCMAIN: vote share (%) obtained by the party of the incumbent Chancellor.

FDPELIM: dummy variable coded 1 (0 otherwise) in 2013 when the FDP did not obtain seats

REUNIF: dummy variable coded 1 (0 otherwise) pointing out boost in seats obtained by CDU/CSU in 1990

Equation (2)

SEATOPP: seat share (%) obtained by the main party opposing the outgoing chancellor

OPPMAIN: vote share (%) obtained by the main party opposing the outgoing chancellor

Equation (3)

SEATFDP: seat share (%) obtained by the Liberal Democrats of the FDP.

FDP: vote share (%) obtained by the Liberal Democrats of the FDP

FDPELIM: dummy variable coded 1 (0 otherwise) in 2013 when the FDP did not obtain seats

Equation (4)

SEATGRUNE: seat share (%) obtained by the Greens (Grünen). This variable takes a zero value from 1961 to 1976.

GRUNE: vote share (%) obtained by the Greens (Grünen). This variable takes a zero value from 1961 to 1976.

REUNIF: dummy variable coded 1 (0 otherwise) pointing out that the first reunification elections in 1990 were unfavorable to the Greens in terms of seats

NOGRUNE: dummy variable coded 1 (0 otherwise) when the Greens did not participate in elections from 1961 to 1976.

Equation (5)

SEATFARLEFT: seat share (%) obtained by the Far left parties. This variable takes a zero value from 1961 to 1976.

FARLEFT: vote share (%) obtained by the Far left parties. This variable takes a zero value from 1961 to 1976.

FARLEFTINF5: dummy variable coded 1 (0 otherwise) when the Far left did not exceed the threshold of 5% of the votes and could not obtain seats like in 2002.

Equation (6)

SEATFARRIGHT: seat share (%) obtained by the Far right parties.

FARRIGHT: vote share (%) obtained by the Far right parties.

FARRIGHTNOSEAT: dummy variable coded 1 (0 otherwise) when the Far right did not exceed the threshold of 5% of the votes and could not obtain seats like in 2013.

A6 – FORECASTS CALCULATIONS

FORECASTING 2025 EARLY GERMAN ELECTIONS

	FINAL FORECAST Vote (%) Normalized	FORECAST (SUR) Vote (%) Raw	FINAL FORECAST Seats number	FINAL FORECAST Seats (%) Normalized	FORECAST (SUR) Seats (%) Raw
SPD	22.4	26.44	204	27.8	25.25
CDU/CSU	33.49	39.52	285	38.7	35.19
FAR RIGHT	18.56	21.91	121	16.5	14.79
GRUNE	7.37	8.7	62	8.3	7.49
FAR LEFT	7.35	8.68	64	8.6	7.74
FDP	4.22	4.98	0	0	0
OTHERS	6.6	7.79	0	0	0
TOTAL	100	118.02	736	100	90.46

Note: since the total raw forecasts calculated for the parties from the SUR model coefficients do not equal 100, they have been adjusted (normalized to 100).

Example: calculation for SPD

- (1) Calculation for the raw forecast of the SPD's vote share (%) (based on the estimated SUR model coefficients): $12.20 + 0.61 \times 15 - 0.27 \times 0.10 + 0.12 \times 43 = 26.44$
With : $POP^{INC} = 15\%$ (SPD) ; $\Delta U_{Q-2} = 0.1\%$ (Change June (t) – June (t-4)); $KANZ_{Q-1}^{INC} = 43\%$ (O. Scholz).
- (2) When the total of raw forecasts is greater or less than 100, it is necessary to normalize the data by relating them to 100. After normalization, Final SPD's vote share (%) = 22.4
- (3) Calculation for the forecast of the SPD's seats percentage (based on the estimated SUR model coefficients): $4.43 + 0.93 \times 22.4 = 25.25$ With: SPD vote share (normalized) = 22.4
- (4) After seats normalization, final SPD's vote share (%) = 27.8 e.g. 204 seats out of 736 (based on 2021 total seats)

B – Main comparisons and changes with 2021 Political-Economy SUR model

Methodology

One of the main methodological changes from the 2021 model (see table 1 below) is the return (as in 2017) to a system of voting equations (treated in SUR) and a system of swing ratios (treated in SUR) to transform votes into seat percentages. The aim is to better anticipate the consequences in seats of situations where a party fails to cross the 5% vote threshold.

The other important change is the addition of an autonomous far-right voting function. Previously, far-right parties were included in other parties (OTHERS).

Equation INCMAIN

Were replaced in 2025 version:

The change in unemployment has replaced the level of unemployment

Have been removed in 2025 version:

The dummy variable SDPINC specifying when SPD was an incumbent

Have been added in 2025 version :

The variable POPINC (average voting intentions (one quarter before the election) for the party of the incumbent chancellor). See p. 2.

The Dummies AFD1321, DUM72 and STRAUSS80. See p.2.

Equation OPPMAIN

Have been removed in 2025 version:

The variable GCOAL. See p. 2.

The variable KANZ q-1 See. p. 2

The dummies DUM 61/80 (political situation before FDP's alliance change); DUM83 (Schmidt replaced by Kohl during mandate)

Have been added in 2025 version :

The variable POPOPP (average voting intentions (one quarter before the election) for the party of the main opponent to the chancellor). See p. 3

The dummy variables DISSOL05, AFD1321, GRUNEOPP. See p.3

Equation FDP

Has been added in 2025 version :

The dummy variables DUM21 and FDP02. See p.4.

Equation GRUNE

Has been removed in 2025 version:

The variable COOPP^{SPD/GRUNE} (percentage of voters expressing their wish to see the Greens (when it is opponent) included in a new coalition with the SPD).

Equation FARLEFT

Has been removed in 2025 version:

The dummy variable LINKIN5 (coded 1 (0 otherwise) when the FARLEFT did not exceed the threshold of 5% of the votes and could not obtain seats).

Has been added in 2025 version :

The variable NEWLEFT0521. See p. 4-5

Equation FARIGHT

New equation. See p.5

Equation OTHERS

Note: this equation has not the same meaning since Far right parties have been removed from OTHERS

Has been removed in 2025 version:

The dummy variables GCOAL 09/17 (see p.2) and AFDINF5 (coded 1 (0 otherwise) when the AFD did not exceed the threshold of 5% of the votes and could not obtain seats).

Has been added in 2025 version :

The dummy variable FW1321. See p.5.

Forecasting The 2021 German Election: A Win for Armin Laschet?

Table 1

(1) $INC^{MAIN} = 43.79 - 0.88.U_{Q-2} - 5.06.SP D^{INC} - 5.06.GCOAL^{09/17} + 0.16.KANZ_{Q-1}^{INC}$ (20.81) (-7.48) (-5.47) (-3.33) (3.83) <i>Adj R</i> ² = 0.73; <i>SER</i> = 2.37; <i>N</i> = 16 (1961-2017)
